

SkillTree

SkillTree is a micro-learning gamification platform that supports multiple training and integration options which enables organizations to use SkillTree as an All in one training platform. It is an innovative approach to implementing self-directed gamified training

Core Concepts

Projects are composed of Subjects which are made of Skills, and a single skill defines a training unit within the gamification framework.

- **Subjects:** Subjects are a way to group and organize skill definitions. They provide a theme for a group of skills and can have their own specific achievement levels.
- **Skills:** A Skill defines a single training unit within the gamification framework
- **Self Reporting:** Self Report is a feature that empowers users to mark skills as completed directly in the SkillTree dashboard
 - **Honor System** - points are awarded immediately
 - **Approval Queue** - request goes into the project's approval queue; project administrators can approve or deny requests. Note When choosing Approval Queue, you may also choose to require users to submit a justification when self-reporting this skill by selecting the 'Justification Required' check box.
 - **Quiz** - a knowledge check composed of multiple questions with a passing requirement; association of a Quiz requires successful passage of that Quiz in order to earn the skill and its points
- **Survey** - a method to get feedback about that skill or collect information related to the skill; association of a Survey requires completion of that Survey before skill and its points are awarded
- **Audio/Video** - points are awarded upon full playback
- **Quiz-Based Knowledge Checks:** A quiz is a knowledge check composed of multiple questions with a passing requirement
- **Associating a Quiz to a skill** will require successful completion of that Quiz in order to earn the skill and its points.
- **Surveys:** A Survey is a data collection technique utilizing one or more questions.

- o Associating a Survey to an existing skill will require completion of that Survey in order to earn the skill and its points.
- o When associated to a skill, the survey is a method to gather feedback about that skill or collect some pieces of important data related to the skill.
- Badges: Badges add another facet to the overall gamification training profile and allow you to further reward your users by providing these prestigious symbols of achievement
- Learning Path: Learning Path adds another facet to the overall gamification training profile, which forces users to complete skills in a specified order.

Skill Descriptions

Skill Descriptions are detailed steps on how to achieve a skill within a large training. These are typically lengthy and utilize various markdown features for complex.

For example, user a skill for “Techniques for Memorizing Bird Names” may look something like this

```
## Techniques for Memorizing Bird Names\n\n### Visual Association\n\n*  
**Technique**: Create visual images that connect the bird name to its  
characteristics or appearance. For example, imagine a \"red-winged  
blackbird\" with bright red wings against a black body.\n* **Practice**: Spend  
a few minutes each day looking at pictures of birds while saying their names  
aloud. Engage your imagination to associate each name with its  
corresponding images.\n\n### Mnemonics\n\n* **Technique**: Use  
mnemonic devices such as rhymes or phrases to help remember tricky bird  
names. For instance, for \"American Robin,\" you might use \"Robins are a-  
bobbing.\"\n* **Practice**: Develop a personal mnemonic for each new bird  
name you encounter, focusing on humor or creativity to make it memorable.\n\n\n### Categorization\n\n* **Technique**: Organize birds into categories  
based on their habitats, colors, or sizes. This helps in creating contextual  
connections that can simplify recall.\n* **Practice**: Create a chart or list  
categorizing birds you want to memorize, and review it regularly to reinforce  
your memory.\n\n\n### Flashcards\n\n* **Technique**: Create flashcards with  
the bird's name on one side and an image or key characteristics on the other.
```

This supports active recall, which enhances memory retention.\n*

****Practice**:** Conduct daily flashcard sessions, mixing the order of the cards to challenge your memory and ensure you can recall the names without prompts.\n\n\n### Repetition\n\n*

****Technique**:** Implement spaced repetition, revisiting bird names at increasing intervals to strengthen memory.\n*

****Practice**:** Schedule review sessions, gradually increasing the time between each session as you become more confident with the names you've learned.\n\n\n### Storytelling\n\n*

****Technique**:** Construct a short story featuring various birds, incorporating their names into a narrative that captures your interest. This engages your creativity and reinforces memory through context.\n*

****Practice**:** Write out or visually map a story with the birds you want to remember, making sure to include vivid details that evoke imagery and emotions.\n\n\n### Sound Association\n\n*

****Technique**:** Associate bird names with sounds or musical notes. For example, if a bird name sounds like a musical note, imagine it as part of a melody.\n*

****Practice**:** Sing or chant bird names to a familiar tune, or create your own catchy jingle to help reinforce memory through auditory cues.\n\n\n### Active Observation\n\n*

****Technique**:** Spend time in nature observing birds, and try to identify their names based on your memory. This real-world application reinforces what you've learned in a practical context.\n*

****Practice**:** Keep a birdwatching journal, noting down the names of birds you observe, along with their characteristics and personal reflections.\n\n\n### Peer Teaching\n\n*

****Technique**:** Teach others the names of birds you've memorized; explaining concepts to someone else can enhance your understanding and retention.\n*

****Practice**:** Form a study group or find a friend who shares your interest in birds. Take turns quizzing each other on bird names to solidify your knowledge.\n\n\n### Mind Mapping\n\n*

****Technique**:** Create a mind map linking bird names to their attributes, categories, or other related concepts visually. This holistic approach aids in contextual memory.\n*

****Practice**:** Regularly update your mind map with new bird names and connections, using colors and images to enhance visual learning.
